

Learn All About Rain!

What is Rain?

Clouds are made of small water droplets. Within a cloud, water droplets come together onto one another, causing each water droplet to grow bigger! When these water droplets get too heavy to stay up in the clouds, they fall to Earth as what we know as rain.

Is Rain Helpful?

Rain fills our Earth's lakes, ponds, rivers, and small streams. Rain also provides fresh water needed by humans, animals, and plants. So rain can be very helpful and humans, animals, and plants need the rain to survive.

Is Rain Dangerous?

If too much rain falls, floods may happen which can be very dangerous. Also, farmers could lose their crops if they receive too much rain. Rain can be very helpful but if there is too much of it, it can be dangerous.

What Do I Need To Do?

1. Open your bag and remove the bottle
2. Take out the other objects and put them aside
3. Have a grown up cut the top of the bottle along the line
4. Collect some rocks from your home and put them into the bottom of your bottle
5. With the markers, and anything you want to use at home, decorate your bottle
6. Put the bottle in a place outside where it rains

7. Throughout the week, measure by coloring the rain gauge with how much rain you get from your own personal rain gauge!
